## Opendora

<https://opendora.minnstate.edu/>

Opendora, developed by PALS, is a digital archive for open educational resource (OER) materials, allowing Minnesota State faculty and librarians to load, access, and share licensed OER. This ultimately results in customized resources that best meet the needs of students while reducing the cost of textbooks. All Minnesota State institutions have access to Opendora for OER materials at no cost.

Using an open source platform, Opendora preserves course material, supports any file format, allows for searchable content, and has easy-to-use data entry forms to load and manage OER materials.
