

5-5-17

Aim: SWBAT continue to find missing angle measurements algebraically.

Do Now: What are the three angle relationships that have a number associated with the relationship? What number is associated with each?

HW: Finish WS

Quiz Tuesday or Wednesday (Angle Relationships)

Final Review Packet Due June 2

Complementary Angles are angles whose sum is  $90^\circ$ .

measure(s)

Solve algebraically.

$$\begin{array}{r} x + 30 = 90 \\ - 30 \quad - 30 \\ \hline x = 60 \end{array}$$

$$x + 2x = 90$$

$$\frac{3x}{3} = \frac{90}{3}$$

$$x = 30$$

$$2x = 60$$

$$\begin{array}{r} 2x \\ 2 \cdot 30 \\ 60 \end{array}$$

$$(x + 20) + (x + 10) = 90$$

$$\begin{array}{r} 2x + 30 = 90 \\ - 30 \quad - 30 \\ \hline \end{array}$$

$$\frac{2x}{2} = \frac{60}{2}$$

$$x = 30$$

$$\begin{array}{r} x + 10 \\ 30 + 10 \\ 40 \end{array}$$

$$\begin{array}{r} x + 20 \\ 30 + 20 \\ 50 \end{array}$$

Supplementary Angles are angles whose sum is  $180^\circ$ .

$$x + 3x = 180$$

$$\frac{4x}{4} = \frac{180}{4}$$

$$x = 45$$

$$3x = 135$$

Solve algebraically.

$$(3x+20) + (2x-10) = 180$$

$$5x + 10 = 180$$

$$\frac{-10 \quad -10}{5x = 170}$$

$$\frac{5x = 170}{5}$$

$$x = 34$$

$$3x + 20 = 122$$

$$2x - 10 = 58$$

$$3x + 20$$

$$3 \cdot 34 + 20$$

$$102 + 20$$

$$122$$

$$2x - 10$$

$$2 \cdot 34 - 10$$

$$68 - 10$$

$$58$$

vertical :  $\cong$   
Angle Relationships

complementary :  $90^\circ$

supplementary  
 $180^\circ$

Find the value of  $x$  in each figure.

perpendicular ( $\perp$ )

Each of the following pairs of angles is either complementary or supplementary. Find the measure of each angle.
