**Mission:** Utilize a systems-based approach to promote equitable and sustainable advancements in health and well-being of people in New York State and around the world

**Vision:** Advance health and well-being, equitably for all people and sustainably for our planet

**Sustainability:** A One Health approach highlights the inter-dependence of human, animal, and environmental health, and requires the coordinated efforts of multiple disciplines and professions. The Planetary Health framework focuses on the public health impacts of anthropogenic environmental changes and understanding of the social, economic, and demographic forces that drive them.

**Equity:** The health and wellbeing of one population should not come at the expense of another, now or in the future. Yet, we live in a society in which one’s zip code is a stronger determinant of health than that individual’s genetic code. Interventions that address the social determinants of health are increasingly recognized as having the greatest potential for impact at scale, and the greatest cost-effectiveness.

**Engagement:** Public health comes when communities mobilize and address their critical needs. Partnerships for community-based interventions that reach beyond health care can have high impact and reduce racial, ethnic, and socio-economic disparities. Engaged project work between universities and communities can bring real-world impact.

**Goals**
- **Goal 1:** Advance equity through public health
- **Goal 2:** Advance sustainability through public health
- **Goal 3:** Develop the public health workforce through education
- **Goal 4:** Address complex public health issues through research
- **Goal 5:** Build community through public health service and engagement

**Methods**
- Through Teaching
- Through Research
- Through Service & Engagement

**Concentration Areas**
- Infectious Disease Epidemiology
- Food Systems and Health

**Values**
- Excellence and integrity in training, discovery, planning, and action
- Support diversity, in all its forms
- Promote practices of health and well-being that are equitable across different populations, sustainable for future populations
- Ensure equitable access to our education, our training, and our services
- Partner in learning, training, discovery and service with diverse individuals and communities
