Working with Farm Files in CNCPS v6.1

Due to Windows 7 and Vista security programming, we have had to modify how Version 6.1 stores farm files. When you use version 6.1 on a Windows 7 operating system, the software will attempt to identify farm files in their current location and will then save them all to the FARMS folder.

Follow these instructions to help you locate your original farm files and move them to the new location:

1. Hidden folders/files must be viewable.
   a. Go to Control Panel
   b. Select Folder Options
   c. Click on the View Tab
   d. Under Files and Folders options, select "Show hidden files, folders, and drives" from the Hidden Files and Folders category
   e. Click on Apply
   f. Click on OK
   g. Close the control panel window
2. Open My Computer and select the C: drive
3. Double click on Users and open the following sequence of folders:
   a. [Your user name]
   b. AppData
   c. Local
   d. Virtual Store
   e. Program Files (or if Program Files (x86) exists, open this one)
   f. Cornell University
   g. CNCPS v. 6.1
   h. Current Farms
4. To move all of your *.cncps files to the new Current Farms folder location in My Documents:
   a. Highlight the files and right click on any of them. Click on copy.
      1. Copying the files will keep the original files as backup.
      2. If you cut the files, you will move the files permanently.
   b. Open My Documents - Cornell University - CNCPS v. 6.1 - Current Farms
   c. Right click and select paste. All of your farm files should now be in the correct location
