3/23/2020 - This Notice of Award has been revised to restrict all activities that involve face-to-face interaction under this grant due to the Coronavirus/COVID-19 pandemic. **This applies to inspections, on-farm readiness reviews, on-farm education or technical assistance activities, and any in-person education & outreach activities - including trainings. This restriction applies regardless of the authority being used to conduct inspections.** This restriction will be in effect until further notice. If there is a need to revise objectives, timeframes, and budgets due to this restriction, please contact your Program Official and Grants Management Specialist to discuss options and to obtain guidance on the submission of a prior approval request.
Protect yourself from COVID-19 and stop the spread of germs.

- Wash your hands thoroughly with soap and water for at least 20 seconds, especially before eating.
- Avoid close contact with people who are sick and stay home if you are sick.
- Avoid touching your eyes, nose, and mouth.
- Stay home as much as possible. Everyone – even young people and those who feel well.
- If you must go out, stay at least 6 feet away from others.
- You must wear a face mask or face covering in public when social distancing (staying 6 feet apart) is not possible, especially on public transport, in stores and on crowded sidewalks.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces.

www.ny.gov/coronavirus
Updated Interim Guidance for Cleaning and Disinfection of Food Manufacturing Facilities or Food Retail Stores for COVID-19

April 11, 2020

To help prevent spread of COVID-19, procedures and supplies should be in place to encourage proper hand and respiratory hygiene as well as routine cleaning and disinfection of high-risk locations. This guidance is provided for any food manufacturing facilities, food distribution centers or food retail stores so that owners, operators and other individuals can incorporate these procedures into their facility protocols.

Background:
On March 7, 2020, Governor Andrew M. Cuomo issued Executive Order 202, declaring a state of emergency in response to COVID-19. Community transmission of COVID-19 has occurred throughout New York. To minimize further spread, social distancing and frequent cleaning measures should be put in place.

Stop the Spread:
Signs reinforcing social distancing of a minimum of 6 feet, hand-washing, and respiratory health should be posted in prominent locations. Examples of signs that may be used are available on the Department of Health (DOH) website at https://coronavirus.health.ny.gov/home. Alternative languages are also available.

Hand Hygiene:
Staff should be reminded to wash their hands with soap and water, for at least 20 seconds:
- Before and after eating;
- After sneezing, coughing, or nose blowing;
- After touching face, hair, cellphones, or clothing;
- After using the restroom;
- Before handling food;
- After touching or cleaning surfaces that may be contaminated; and
- After using shared equipment and supplies.

What steps should be taken to clean and disinfect against COVID-19?

Now:
All facilities should continue performing routine cleaning and sanitization of their facilities. Additionally, high-risk locations (see below) warrant cleaning and disinfection on a regular schedule.

Employees:
Follow all steps listed in the “STOP THE SPREAD” poster. Also, consider using a face covering if in the presence of others, if available.

If an individual with laboratory confirmed COVID-19 was symptomatic while in your facility:
Immediately contact your local health department. Clean and disinfect throughout the area.

Empire State Plaza, Corner Town, Albany, NY 12237 | health.ny.gov
Respiratory Hygiene:
- Cover coughs and sneezes with a tissue or the crook of the elbow.
- Dispose of soiled tissues immediately after use.
- DOH supports members of the public who choose to wear cloth face coverings in public settings where social distancing measures are difficult to maintain (e.g., grocery stores and pharmacies), especially in areas of significant community transmission. For additional information, please refer to the DOH Health Advisory, issued April 8, 2020, available at https://coronavirus.health.ny.gov/system/files/documents/2020/04/doh_covid19_cloth_masks_040820.pdf.

Routine Cleaning:

Standard Infection Control Practices

As part of standard infection control practices, routine cleaning should be rigorous and ongoing. Time should be allocated daily for individuals to routinely clean. Frequently touched surfaces must be prioritized for routine cleaning because these surfaces can be reservoirs for germs and an exposure pathway for transmission of COVID-19.

Examples of priority areas for routine cleaning include:
- High-contact surfaces that are touched by many different people, such as light switches, handrails, can handles, equipment buttons, shared equipment, point of sale devices, and doorknobs/handles.
- Floors and walls.
- Trash containers.
- Restrooms.
- Heat and air conditioner vents.
- Horizontal surfaces and light fixtures.
- Frequently used equipment.
- Uniform, protective equipment, and/or linens.

Identify and routinely clean and disinfect high-risk locations.

Examples of high-risk locations include:
- First Aid Station/Health Office
  - Clean and disinfect health carts regularly (after each use)
  - Cover treatment tables and use pillow protectors.
  - Discard or launder coverings after each use.

Examples of frequently touched surfaces:
- Shared equipment.
- Counters, tables, and chairs.
- Door handles and push plates.
- Handrails.
- Kitchen and bathroom faucets.
- Equipment surfaces.
- Equipment buttons.
- Light switches.
- Remote controls.
- Shared telephones.
- Shared computers, keyboards, and mice.
- Shared electronics and phones.

Note: Some surfaces or equipment are difficult to clean or are sensitive to liquids. When shared, they may contribute to indirect transmission. Locations with shared-use equipment should provide posted signs regarding proper hand-hygiene before and after using such equipment to minimize disease transmission. Also, consider using removable, washable covers to protect hard to clean equipment against spills and facilitate cleaning.
Restrooms:
- Clean and disinfect all restroom surfaces, fixtures, door knobs, push plates, and switches (at least once daily).

Dining Areas/Breakrooms:
- Clean and disinfect counters, tables, and chairs regularly (at least once daily).

Locker Rooms:
- Clean and disinfect surfaces, tables, chairs, and lockers regularly (at least once daily).

Other Frequent-Touched Surfaces or Equipment or Areas:
- Clean and disinfect frequently touched surfaces on a periodic schedule as operational considerations allow, at least daily.

Cleaning and Disinfection:

Cleaning removes germs, dirt, and impurities from surfaces or objects. Disinfecting kills germs on surfaces or objects.

Individuals should use protective equipment (e.g., gloves) as recommended on product labels. Carefully read and follow all label instructions for safe and effective use.

Step 1: Cleaning: Always clean surfaces prior to use of disinfectants in order to reduce soil and remove germs. Dirt and other materials on surfaces can reduce the effectiveness of disinfectants. Clean surfaces using water and soap or detergent to reduce soil and remove germs. For combination products that can both clean and disinfect, always follow the instructions on the specific product label to ensure effectiveness. In New York State, all state agencies and state authorities are required to use green cleaning products. For additional information on the laws regarding the use of green cleaning products, see the Policy, Guidelines and Report section of NY’s Green Cleaning Program website.

Step 2: Disinfection: Cleaning of soiled areas must be completed prior to disinfection to ensure the effectiveness of the disinfectant product. Use the DEC list of products registered in New York State identified as effective against COVID-19. This list corresponds to those identified by the EPA.

If these products are unavailable, disinfect surfaces using an EPA- and DEC-registered disinfectant labeled to be effective against rhinovirus and/or human coronavirus. If these commercial products are unavailable, it is also acceptable to use a fresh 2% chlorine bleach solution (approximately 1 tablespoon of bleach in 1 quart of water). Prepare the bleach solution daily or as needed.

- Label directions must be followed when using disinfectants to ensure the target viruses are effectively killed. This includes adequate contact times (i.e., the amount of time a disinfectant should remain on surfaces to be effective), which may vary between five and ten minutes after application. Disinfectants that come in a wipe form will also list effective contact times on their label.

- For disinfectants that come in concentrated forms, it is important to carefully follow instructions for making the diluted concentration needed to effectively kill
Step 3: Disposal: Place all used gloves and other disposable items in a bag that can be tied closed before disposing of them with other waste. Wash hands with soap and water for at least 20 seconds immediately after removing gloves or use an alcohol-based hand sanitizer containing at least 60% alcohol if soap and water are not available. Soap and water should be used if hands are visibly soiled.

Notification, Isolation and Disinfection:

If a laboratory confirmed case of COVID-19 works in your facility or was known to be present in your facility, promptly notify your local health department and the Department of Agriculture and Markets at RRT@agriculture.ny.gov, and perform cleaning and disinfection of all surfaces throughout the area immediately.

Your local health department will be involved in monitoring the affected individual while symptomatic (and therefore isolated) until their recovery. If an employee, the local health department will also be involved in clearing that individual from their isolation after their full recovery, thereby clearing them before returning to work.

Cleaning and disinfection should be conducted by individuals who have been trained to use products in a safe and effective manner. Training should be ongoing to ensure procedures for safe and effective use of all products are followed. Training assures that individuals are reminded to read and follow use and safety instructions on product labels. It should also identify the location of all personal protective equipment (e.g., gloves) that should be used.

*NYSDEN registration will not be listed on disinfection product labels. Information about disinfection product registration with NYSDEN can be found at http://www.dec.ny.gov/nyepad/products. If you have any questions about NYSDEN pesticide registration, please call the NYSDEN Bureau of Pesticide Management at 518-402-6748.

Agworkforce.cals.cornell.edu
“Never give in. Never, never, never.”
-Winston Churchill, Prime Minister of the United Kingdom, 1940-1945.
Farm Leaders Must Persevere

1. **Lead your team and reinforce vigilance** about sanitation and social distancing practices. Communicate and re-communicate the value of prevention.

2. **Provide the needed tools**: face coverings, cleaning solutions, brushes, buckets, mops, hand sanitizers, etc.

3. Develop the **standard operating procedures (SOPs)** for preventing COVID-19. Link to [CDC](https://www.cdc.gov) and [OSHA](https://www.osha.gov) recommendations for business.

4. **Train employees** in how to use SOP's and tools. **Train and re-train repeatedly** as new recruits arrive at the farm. Make training for COVID-19 part of your **employee onboarding** and a key part of a manager's job.

5. **Assign cleaning details**. Use your leadership authority and assign important tasks to individuals as part of their work. Assign cleaning in farm-provided housing also.

6. Manage for compliance with **measurement, feedback and reinforcement**.

7. **Model the behaviors** you want from followers. Your actions speak louder than your words so model grit, determination, and most of all, perseverance.
Prevention & Control Resources

• Talk with employees about coronavirus, how it spreads, and how to prevent infection.

• Post language-appropriate information in your workplace and employee housing.

• U.S. Centers for Disease Control and prevention (CDC) provides clear guidance about preventing infection in English, Spanish and many other languages.
  • CDC printable factsheets and posters, download at: https://www.cdc.gov/coronavirus/2019-ncov/communication/factsheets.html
  • CDC also provides: Interim Guidance for Businesses and Employers to Plan and Respond to Coronavirus Disease 2019 (COVID-19)

• New York State Department of Health has a Coronavirus Website with posters in English, Spanish and other languages for preventing coronavirus infection.
Use Visuals and Language-Appropriate Resources

Stop the Spread of Germs

Help prevent the spread of respiratory diseases like COVID-19.

- Avoid close contact with people who are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Avoid touching your eyes, nose, and mouth.
- When in public, wear a cloth face covering over your nose and mouth.
- Clean and disinfect frequently touched objects and surfaces.
- Stay home when you are sick, except to get medical care.
- Wash your hands often with soap and water for at least 20 seconds.

Detenga la propagación de gérmenes

Ayude a prevenir la transmisión de enfermedades respiratorias como el COVID-19

- Evite el contacto cercano con personas que están enfermas.
- Cubrrese con un pañuelo desechable al toser o estornudar y luego bébitela en la hora.
- Evite tocarse los ojos, la nariz o la boca.
- Cuando esté en un lugar público, use una cubierta de tela para la cara sobre sus nariz y boca.
- Lávese las manos frecuentemente con agua y jabón por al menos 20 segundos.

cdc.gov/coronavirus
Sick Leave

• What is your sick leave policy?
  • All recommendations call for sick people to stay home! Toughing it out is a great way to turn an individual problem into a workforce disaster.
  • Do employees feel financially or otherwise obligated to come to work even if they are sick?

• Instruct sick employees to stay home.
  • Symptoms: cough, shortness of breath or difficulty breathing, fever, chills, muscle pain, sore throat, new loss of taste or smell
  • CDC's "What to do if you are sick," in English, Spanish and other languages.

• New York requires sick leave for COVID-19.
• Federal FFCRA requires 80 hours of COVID-related sick leave and can be reimbursed.
Plan for Distancing or Quarantine in Employee Housing

• Spread out employees in existing housing to increase social distancing and reduce infection
  • Keep beds 6 feet apart, increase ventilation by opening windows or turning up fans

• Act now to secure additional housing, if possible
  • Federal and state authorities are being flexible with additional H-2A and other temporary housing
  • NYSDOL: keep informed but do what is right to protect employee health

• Make plans now for separating sick or quarantined workers
  • Contact county health department if you have an employee who needs to be quarantined/isolated and this can’t happen at home
  • Facilities, management plans, food and water, cleaning, monitoring health

• Discourage visiting and social interaction:
  • Train about COVID-19 social distancing
  • Organize grocery/supply runs, discourage individual store trips/socializing.
  • Implement and reinforce the governor’s 10-point plan in NYS on PAUSE
    • No gatherings of people, stay 6-feet part, limit contact
    • Point 5: "Businesses and entities that provide other essential services must implement rules that help facilitate social distancing of at least six feet."

• Recommendations for Temporary Worker Housing from Washington State Dept of Health
Employee Transportation

• Hand cleaning before and after
• Limit passengers to maintain 6 feet of separation
• Stagger start times and shifts
• Wear cloth masks
• Open windows to increase ventilation
• Consider installing physical barriers
• Clean and disinfect vehicles after each trip
• NY Center for Agricultural Medicine and Health https://www.nycamh.org/covid-19/
New York Forward Plan
https://forward.ny.gov/industries-reopening-phase

Business Safety Precautions (quoted from NY Forward Plan)

- Each business and industry must have a plan to protect employees and consumers, make the physical work space safer and implement processes that lower risk of infection in the business.
- In developing these plans, businesses will need to consider three main factors.

1. **Protections for employees and customers.** These include possible adjustments to workplace hours and shift design as necessary to reduce density in the workplace; enacting social distancing protocols, and restricting non-essential travel for employees.

2. **Changes to the physical workspace,** including requiring all employees and customers to wear masks if in frequent close contact with others and implementing strict cleaning and sanitation standards.

3. **Implementing processes that meet our changing public health obligations,** like screening individuals when they enter the workplace, or reporting confirmed positives to customers. While these processes will vary from business to business, almost everyone will have to adapt, in some way or another, to our new normal.
Interim Guidance For Non-food Related Agriculture Activities During The Covid-19 Public Health Emergency

- 10-page document with extensive and helpful guidance
- “Responsible Parties” appears to be business owners/managers
- Document asks you to “affirm” that you read it at a state website:
  - “At the link below, affirm that you have read and understand your obligation to operate in accordance with this guidance: [https://forms.ny.gov/s3/ny-forward-affirmation](https://forms.ny.gov/s3/ny-forward-affirmation)”
NY Forward: Business Re-Opening Safety Plan Template

I. People
   A. Physical Distancing

II. Places
   A. Protective Equipment
   B. Hygiene and Cleaning
   C. Communication

III. Process
   A. Screening
   B. Contact tracing and disinfection of contaminated areas

IV. Other
Summary

• Listen to the science.
• Lead with authority and communicate, communicate, communicate.
• Be empathetic, this is tough for everybody.
• Write your plan, stick to your plan, and document your actions.
• Persevere.

How to Wear and Wash Your Mask

Lávese las manos.
Wash your hands.

Presione su nariz para ajustar la mascarilla.
Press nose wire to fit.

Amarre los lazos firmemente, antes de poner la gorra.
Tie ties firmly before putting hat on.

Use la mascarilla correctamente.
Wear mask properly.

No toque la máscara.
Do not touch mask.

Quitese la máscara desamarrando lazos.
Remove mask with ties.

Quitese la máscara para comer o beber.
Remove mask to eat, drink or smoke.

No se ponga mascarilla usada.
Don’t use mask again.

Ponga la mascarilla usada en una bolsa.
Put used mask in bag.

¿Qué es el Coronavirus?

Coronavirus conocido, como COVID-19, es un virus nuevo que causa síntomas parecidos a la gripe o flu comunes. El virus se transmite a través de varias maneras, incluyendo:
• A través del aire cuando personas infectadas hablan, estornudan, o tosen.
• Tocando superficies contaminadas con el virus y tocándose la cara, boca u ojos.

¿Cuáles son los síntomas?

- Tos seca
- Dificultad al respirar
- Fiebre más de 100.4 °F
- Dolor de cabeza, garganta o pecho.

¿Cuándo debo llamar al 911 o ir a la sala de emergencia? Si usted tiene:

1) Fiebre más de 102 °F.
2) Grave dificultad al respirar.
3) No puede comer o levantarse de su cama.
4) Si sus labios están morados.
¿Cómo se puede proteger?
How can one protect oneself?

• **Limite salir** a lugares donde estén muchas personas.

• Manténgase por lo menos 2 **metros** alejado de otras personas en lugares públicos.

• **No se toque la cara, boca, ojos o nariz** sin antes lavarse o desinfectarse sus manos.

Si sale de su hogar a comprar o a trabajar:
✓ **Siempre cúbrase la boca y la nariz** con una mascarilla.
✓ **Quítese los zapatos** antes de entrar a su hogar y cámbiese su ropa.
✓ **Lave y desinfecte sus manos** vigorosa y frecuentemente.
✓ **Lave frutas, verduras y tire los empaques** que traen algunos productos de la tienda al venir de compras.
Suggestions for staying healthy during reopening in NYS

Sugerencias para mantener buena salud con la reapertura en NYS

Wednesday, May 20, 2020
Miércoles, Mayo 20, 2020

6:30 PM (ET)

Doctor José Canario, Director de Medicina General del Finger Lakes Community Health

Webinars and Spanish language calls

Will provide suggestions for remaining healthy during reopening.

Q and A and responses to questions submitted in advance.

Produce Safety Alliance Director
May 14, 2020
Consider the Science

- SARS-CoV-2 has created a disruption across the whole food system and a need for new considerations
- Must still manage food safety as well as COVID 19 risks
  - Good news! Some practices overlap and already in place
- Prioritize most impactful actions
- Each operation is different, so important to think through how implementation looks
- Something new almost everyday...for everyone!
  - We are all learning!
Priority #1 : Social Distancing

• Social Distancing is Most Important!
  – SARS-CoV-2 is predominantly spread person to person

• Think about the entire operation and how to implement at least 6 ft of distance between people
  – Review planting, harvest, packing, sales
  – May need to rethink work schedules
  – May need to consider flow
  – Things may move slower

• Require cloth face coverings for everyone
Social Distancing Challenges and Risk Reduction Options

• Social distancing is not possible
  – Critical practices; Checking out customers
  – Use barriers and practices to reduce risks; Plexiglass

• Divide crews by family, transportation, housing
  – Group people who are socially together
  – Minimize risks of losing all labor groups

• For sales, limit people & family groups
  – Reserve times
  – Establish wait protocols
Hand sanitation & Face Touching

- Handwashing & hand sanitizer use
  - Employees & Customers must have access; must use
  - Food safety & COVID-19!
- Don’t touch the face!
  - Very, very difficult for people
  - Include things people overlook; eating, smoking
  - Makes handwashing and hand sanitizer use that much more important!
Avoiding Touching Your Face
And what that really means...
Cleaning, Sanitizing, Disinfecting
Oh My!

- Pre-COVID-19 still a need to understand difference between cleaning and sanitizing
- Stick with current cleaning and sanitizing SOPs unless reason to believe COVID-19 on the farm
- Increase C/S of commonly touched surfaces
  - May use disinfecting for these areas
- COVID-19 created many questions about how and when to disinfect
  - EPA N-List of disinfectants: https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2
Actions for Positive Impact

• Communication
  – Always important; Critical Now!
  – Lots of misinformation, need to convey risks, policies, and plans to employees, customers, and consumers

• Update farm food safety plan
  – COVID-19 is not foodborne, but since food safety plan has relevant policies and SOPS, easiest to add/modify

• Training, Training, Training
  – Social distancing & cloth face coverings; work & community
  – Hand sanitation; commonly touched surface sanitation
