

Sustainable Animal Agriculture 2050

How is animal agriculture helping to meet the demand for healthy food?

This eight-week internship program in sustainable animal agriculture aims to **inspire talented students to become the thought leaders in agricultural sustainability!**

Participants will **engage in agricultural research** within the Department of Animal Science at Cornell University with faculty mentors, covering a breadth of topics.

Each student will have an assigned **faculty mentor** with a structured plan to facilitate opportunities to interact with other students and mentors through lectures, discussions, field trips, and research.

One of the primary objectives will be to provide enough background so that students can **investigate, experiment and be creative problem solvers** in order to construct long-lasting solutions of sustainable agriculture.

- The internship program will take place from **June 3rd, 2019- July 26th, 2019**, at Cornell University's Ithaca campus in Upstate New York.
- Housing in the dormitories and a food allowance for campus eateries will be provided.
- Interns will receive a \$350/week stipend.
- Students travelling from distances greater than 500 miles to Ithaca may be eligible to receive funds to assist with travel costs.
