HELP STOP THE SPREAD: WASH YOUR HANDS

COVID-19 is believed to spread mainly from person to person:

- Between people who are in close contact with one another (within 6 feet).
- Through respiratory droplets produced when an infected person coughs, sneezes or talks.
- Droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.
- COVID-19 may be spread by people who are not showing symptoms.

Help stop the spread. Wash your hands often with soap and water for at least 20 seconds, especially after going to the bathroom, before eating and after blowing your nose, coughing or sneezing.
