TIPS FOR SUCCESS
Learning in a Remote Setting

1. PLAN OUT YOUR TIME
Making a schedule that allocates regular, reoccurring blocks of time for each class. Note due dates and office hours too! And don't forget to build in time for eating, sleeping, socializing.

2. COMMUNICATE WITH FELLOW STUDENTS
People learn better in supportive environments. Use Zoom, Teams, Canvas Chat, etc. to connect with your classmates and create study groups to aid your learning.

3. BEGIN WORK EARLY
It may take extra time to learn and use the technology required to complete remote assignments. Asynchronous learning requires a lot of time management. The possibility of unstable internet connections also means that you might need more time than you usually would.

4. TAILOR YOUR WORK ENVIRONMENT
Right now we can't necessarily work the way we used to. Think about the environments where you are most productive. How can you bring some of those elements into your space?

5. TRY NOT TO MULTITASK
There is a lot to distract us right now, especially when our main tasks take place on computers and tablets. Think about using Do Not Disturb settings or setting aside short, concentrated study periods interspersed with breaks.
