

Research Assistant – Riverscape Mapping of Rivers

We are seeking a research assistant to help with field work in and around Eugene. Potential for longer, multi-day trips and on-campus data processing also exist, pending relevant experience. Responsibilities include monitoring an array of sensors measuring a variety of river characteristics, rowing a cataraft in whitewater (maximum of class III).

We are interested in a motivated individual who is comfortable traveling and navigating a variety of rivers. An academic history of, or general interest in, earth sciences, geography, GIS and remote sensing is a plus. Must be willing to work weekends and midweek, as your schedule allows.

To apply, email a PDF or Word document to azettler@uoregon.edu with the following information:

- A brief introduction to yourself
- Any relevant academic course work to fluvial geomorphology, remote sensing, or related fields.
- Experience rowing rafts (professional and/or private trips) including a list of what rivers/runs you have rowed
- Any certifications you hold (sUAS Part 107, 1st aid, etc.)
