## Future Questions for HPOP

- Can a brief body size bias workshop improve the workplace environment and reduce health risks for employees?  
- How do changes in parental stress affect how parents use food to manage their children's behavior?  
- Does a parent's ability to self-regulate temper these associations?  
- What factors contribute to high school principals’ decisions to have an open vs. closed campus policy?  
- What increases young men's risk for disordered eating? Is it social media, financial stress, or something else entirely?
