The SNAP Lab is Hiring!  
*Earn research credits to join our research team!*

Research in the Stress Neurobiology and Prevention (SNAP) Lab focuses on the effects of early adversity, developing and testing preventative interventions to improve outcomes for high-risk families. Our lab is dedicated to translational research with direct implications for policy and practices that impact high-risk families.

As a Research Assistant in the SNAP Lab you will:
- Learn about early brain development, toxic stress and parenting
- Gain experience with clinical intervention research
- Have the option to earn research credits (PSY401) for your work

We are looking for students who can:
- Commit to 2-3 terms of work starting in January 2020
  - Some projects include the possibility of paid work over the summer!
- Commit to 6-9 hours of research work per week
- Demonstrate exceptional organizational skills, attention to detail, communication and dependability

*The SNAP Lab is currently hiring research assistants to help out with several different projects, including opportunities to learn video-coding skills, work directly with family participants, and engage in literature reviews and qualitative coding. Check out our website for more specific details about the projects that are hiring!*

To apply for this position, please submit your resume and a brief cover letter through our website: https://snaplab.uoregon.edu/join/. In your application, please specify which projects you are most interested in joining.

If you have questions, please email Andrea Imhof: aimhof@uoregon.edu for more information.
