Eugene Center for Brew Sciences & Education

The program for this studio focuses on the design of a multi-story center for brew science and education in Eugene, Oregon. Students will study the rapidly expanding craft brewing and fermentation industry and work to develop a scheme that includes space for making, space for serving, and space for education on the business and science of this regional craft.

This course is the fourth and final introductory design studio in the undergraduate core sequence. Graphic presentation, critical thought, and speaking and writing abilities are understood as key elements of student development in basic design. Studio assignments in this course are cumulative, build in complexity, and are intended to accelerate the student’s growth as a designer. Students are expected to work in an iterative fashion and make conceptually coherent decisions throughout the design process based upon precedent, the interaction between formal ordering systems and activity support, building construction systems, and life safety and accessibility needs. One of the primary goals of the second-year design studios is to enable students to develop strong working processes and methods that will allow them to be prepared for and successful in more advanced studios and beyond.

Time/ Place Monday/ Wednesday/ Friday. 1:00 - 4:50p. Design studio room assignments tbd

6 credit hours | Prerequisite: ARCH 383 Introductory Architectural Design Studio III
