Building Information Modeling: Revit

Grading: Pass/No Pass (2 Credits)
Time: Monday & Wednesday 5:00 - 6:50pm
Location: Remote/ Online
Instructor: Katalin Czégé
Office Hours: By appointment

Inspiration for the class term assignment of a 25’x30’ Accessory Dwelling Unit (ADU)

COURSE DESCRIPTION
Building Information Modeling (BIM) has come a long way in the last decade. Revit is a great tool to dive into BIM and also to learn how to effectively create documentation for the design industry. Revit can be one of your best friends when it comes to your toolbox, but in order to get there, understanding and speaking the language the program uses is key. In this course we will learn how to connect with the program in a way that creates flow rather than fighting upstream. Our goal is to be able to make computers through software help our natural processes, rather than hinder our natural design thinking. Join this class to add to your repertoire in your toolbox for communicating your design thoughts.
