*This course is a required subject area course for IARC majors and available to those seeking interior minors. Coursework does require familiarity with design drafting and graphics software; students outside of the core SAE majors may have difficulty completing assignments without these skillsets.*

Interior Construction Elements focuses on interior assemblies in the built environment, building codes & regulations, and the integration of allied trades & systems. The course will complement additional curricular coursework such as Building Construction and Environmental Controls II. Course content will be explored through lecture, field observation, exams, and application through drawings & a small scale cumulative project.
