April 4, 2008

The Dartmouth Undergraduate Journal of Science (DUJS), one of the first undergraduate science journals in the country, will celebrate its 10<sup>th</sup> anniversary in conjunction with the Wetterhahn Science Symposium at Dartmouth College on May 22. The symposium, sponsored in partnership with the Women in Science Program, will feature research by Dartmouth students and a keynote address by Dr. Pamela Hines, Senior Editor at *Science* magazine. The DUJS will also host a reception for invited guests at The Hanover Inn in celebration of its decade-long devotion to science writing.

Over the past 10 years, the DUJS has published quarterly issues covering recent advances, interviews with Dartmouth scientists, and breakthrough research by undergraduates. The DUJS serves to expose students to the peer-review process that is at the heart of science research today. In addition, students participate in the writing, editing and design of the journal. The DUJS is responsible for engaging its membership and the greater student body with scientists from the world of professional journalism. With a circulation of over 1,600 in print and 1,500 online, the DUJS looks forward to continuing to expand its science coverage in the years to come.

*The Dartmouth Undergraduate Journal of Science aims to increase scientific awareness within the Dartmouth community by providing an interdisciplinary forum for sharing undergraduate research and enriching scientific knowledge.*
