2016 ANNUAL REPORT

Acknowledgements

The 2016 Annual Report was made possible by:

- ➤ Collaborative efforts of over 400 university and college counseling centers
- ➤ Association for University and College Counseling Center Directors (AUCCCD)
- ➤ Titanium Software, Inc.
- ➤ The American Foundation for Suicide Prevention (AFSP)
- ➤ Penn State University's Student Affairs

CCMH Research Team at Penn State University

EXECUTIVE DIRECTOR:

Ben Locke, Ph.D.—Senior Director, Counseling and Psychological Services

PROJECT MANAGER:

Ashley Stauffer, M.S.

COUNSELING AND
PSYCHOLOGICAL SERVICES:

Andres Perez Rojas, Ph.D.—Post Doctoral Fellow

Allison Lockard, Ph.D.—Psychology Intern

Brett Scofield, Ph.D.—Assistant Director, Research and Technology

Ted Bartholomew, Ph.D.—Psychology Intern

i

DEPARTMENT OF EDUCATIONAL PSYCHOLOGY, COUNSELING, AND SPECIAL EDUCATION:

Professors of Counseling Psychology Kathleen Bieschke, Ph.D. Jeffrey A. Hayes, Ph.D.

DEPARTMENT OF PSYCHOLOGY: Professor of Clinical Psychology Louis G. Castonguay, Ph.D.

Doctoral Students in Clinical Psychology Dever Carney, B.A. Rebecca Janis, B.S. Soo Jeong Youn, Ph.D. Henry Xiao, B.A.

STUDENT AFFAIRS RESEARCH AND ASSESSMENT:

Adam Christensen, Ph.D.—Director
Kirsten Hochstedt, M.S.—Graduate Assistant

OFFICE OF PLANNING AND INSTITUTIONAL ASSESSMENT: **Alexander Yin, Ph.D.**—Senior Planning and Research Associate

CCMH Advisory Board Members (2015)

John Achter, Ph.D.—Associate Dean of Students, University of Wisconsin-Stout

Cynthia Cook, Ph.D.—Executive Director of Counseling, Health, and Career Services, University of Houston-Clear Lake

Michelle Cooper, Ph.D.—Clinical Director, Counseling and Psychological Services, Western Carolina University

Carolyn Heitzmann Ruhf, Ph.D.—Staff Psychologist, Student Counseling Services, University of Southern California

Nathaniel Hopkins, Ph.D.—Staff Psychologist and Coordinator for Information and Systems, University of Kentucky Counseling Center

Brian Mistler, Ph.D.—Associate Dean of Students and Director of Health Services, Ringling College of Art and Design

Ellie Olson, Ph.D.—Director of Counseling Services, Simpson College

David Reetz, Ph.D. (AUCCCD liaison)—Director, Rochester Institute of Technology

Ariella Soffer, Ph.D.—Intake Coordinator, Counseling and Wellness Services, CUNY Hunter College

Richard Tyler-Walker, Ph.D.—Assistant Director/Training Director, North Carolina State University

Ryan Weatherford, Ph.D.—Professor and Staff Psychologist, Counseling and Psychological Services, West Chester University

Curtis Wiseley, Psy.D.—Director of Counseling Services, School of Professional Counseling, Lindsey Wilson College

NEW MEMBERS IN 2016:

Deb Cohen, Ph.D.—Assistant Director and Senior Psychologist, Center for Counseling & Student Development, University of Delaware

Mark Perez-Lopez, Ph.D.—Associate Director and Research Coordinator, Counseling Center, Georgia Southern University

Samuel Park, Ph.D.—Psychologist and Director of Research & Information Systems, Counseling and Psychological Services, University of California San Diego

Tyler Pedersen, Ph.D.—Assistant Director, Counseling and Psychological Services, Brigham Young University

CCMH: Bringing Science and Practice Together

INTRODUCTION AND ORIENTATION

During 2015-2016, the membership of CCMH grew to more than 400 institutions making this the largest and most comprehensive report on college students seeking mental health treatment to date. College and university counseling centers make this report possible by participating in a broad range of activities that contribute to both day-to-day clinical practice and the research on college student mental health. CCMH is deeply appreciative of each counseling center's participation and the efforts of our many partners who help to make this report possible each year.

The 2016 Annual Report summarizes data contributed to CCMH during the 2015-2016 academic year, closing on June 30, 2016. De-identified data were contributed by 139 college and university counseling centers, describing 150,483 unique college students seeking mental health treatment (a 50% increase over last year); 3,419 clinicians; and over 1,034,510 appointments.

The following are critical to understand when reading this report:

- 1. This report describes college students receiving mental health services, NOT the general college student population.
- This report is not a survey. The data summarized herein is gathered during routine clinical practice at participating counseling centers, is de-identified, and then contributed to CCMH.
- The number of clients will vary by question because not all questions are asked at each center and due to variations in the consent process by institution.
- Counseling centers are required to receive IRB (institutional review board) approval at their institution in order to contribute anonymous, de-identified data.

2016 Report Highlights

The following are key findings and implications contained in this year's report:

- 1. Lifetime prevalence rates of "threat-to-self" characteristics (nonsuicidal self-injury and serious suicidal ideation) increased for the sixth year in a row (page 5). This persistent trend, combined with dramatic increases in demand for mental health services documented in last year's report, confirm that counseling centers are evaluating and managing increasing numbers of students who may also represent "threat-to-self."
- 2. Despite increasing demand marked by risk, lifetime prevalence rates for prior mental health treatment remain stable for the sixth year in a row (page 4). One in two students that sought treatment has had prior counseling, one in three has taken prior medications, and one in ten has been hospitalized. The six-year stability of these trends suggests that students referred for counseling, *do not* have increasing rates of preexisting mental health concerns.
- 3. A supplemental survey of CCMH counseling centers found that, on average, counseling centers are providing 28% more "rapid-access" service hours per client and 7.6% fewer "routine" service hours per client over the last six years (page 3). While preliminary in nature, these findings suggest that counseling centers are changing operationally in response to growing demand, characterized by risk, and that this change may be impacting routine treatment capacity, especially when funding is flat. In the context of growing risk-based utilization, this finding highlights the importance of maintaining and growing routine treatment capacity to care for students after the initial rapid response has been provided.
- 4. Anxiety and depression continue to be the most common presenting concerns for college students as identified by counseling center staff (page 9). In addition, students' self-reported distress levels for depression, generalized anxiety, and social anxiety continue to evidence slight but persistent increases each year for the past six years (page 6). Other areas of self-reported distress (academic, eating concerns, hostility, substance abuse, and family distress) have remained relatively flat or decreasing. Thus, anxiety and depression are not only the most common concerns, but students' distress in these areas appears to be growing slowly while other areas of distress are flat or decreasing. These findings highlight the fact that not all aspects of mental health are worsening and that

1

it will be important to better understand the role of depression and anxiety in college students.

- 5. Data gathered from counselors at the end of counseling (termination) is reported on for the first time in this year's report (page 11). Key findings include:
 - a. Therapists identified that "client drop-out" played a role in one-third of all terminations, which raises the question of whether students and counselors have different assumptions when scheduling a next appointment. Further, this preliminary no-show rate suggests that the management of client drop-out should receive greater attention during treatment and clinician training.
 - b. Institutional policies (such as session limits or fees) play an important role in determining how treatment ends.
 - c. The majority of clients (at least 64%) were not treated with psychiatric medications during treatment.
 - d. Treatment concerns at termination mirror presenting concerns at the start of treatment.
 - e. The vast majority of treatment concerns were rated as having mild to moderate improvement, on average, at the end of treatment.
- 6. The most common number of appointments per student is one (1), students average 4.66 counseling appointments, and a minority of students utilize a majority of services (page 7).
- 7. Trends in students' thoughts or actions related to harming others continue to be infrequent and stable or decreasing (page 5).
- 8. Over the last six years, students are reporting decreasing rates of distress related to substance/alcohol use and a decreasing frequency of binge drinking (page 5). In contrast, over the last four years, students are reporting slightly increasing rates of marijuana use.

Impact of Increasing Demand Characterized by Risk

Overview: Last year's Annual Report (2015) observed two key national trends over five years of data: (1) the average level of counseling center utilization grew by 30% while the average institutional enrollment grew by only 5%, and (2) this growth in demand includes a persistent increase in "threat-to-self" characteristics such as nonsuicidal self-injury and suicidal ideation (despite no change in the rates of prior mental health treatment).

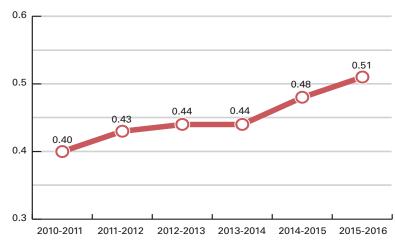

To explore the potential impact of these trends on counseling centers, CCMH conducted a supplemental survey in October 2016 in which CCMH counseling centers were asked to categorize all local individual appointment types into either (a) rapid access or (b) routine. Rapid-access services were defined as services that are typically available within one to five days year-round and include appointments such as crisis, walk-in, on-call, or triage/screening services. Routine services (i.e., all other individual appointments) do not have guaranteed availability across the year and may include intakes, individual counseling, specialized counseling, case management, psychiatry, etc. As part of the survey, CCMH counseling centers provided up to 10 years of data including hours of service, appointments, and clients served. A total of 86 institutions responded with varying years of data. After a careful review of the data, a six-year time span was selected to maximize both center representation and the length of trend period (few institutions contributed data older than six years) resulting in a data set of 81 institutions.

Analysis: For each counseling center by year, the number of total scheduled service hours (rapid-access or routine) was divided by the total number of clients served by the center. The resulting annual service ratios per center were then averaged across centers, by year, producing two average annual ratios of service hours per client: (a) rapid-access hours per client and (b) routine hours per client.

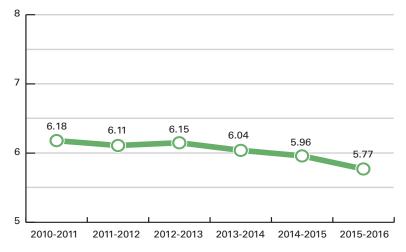

Results: As illustrated by the graphs above, rapid-access hours per client has increased 28% over six years, whereas routine hours per client has decreased by 7.6%. (These are trends and do not prove a causal relationship.)

Discussion: When these six-year trends are considered alongside the findings from last year's 2015 Annual Report, one possible interpretation is that counseling center operations are successfully responding to the increase in risk-based utilization by reallocating resources in order to rapidly respond, evaluate, and manage the influx of students representing potential risk. This shift, especially in centers with funding models that don't increase with demand, may impact the availability of routine services after the initial contact. Therefore, colleges and universities are encouraged to specifically attend to routine treatment capacity (not just the speed of initial response) as they consider to respond to growing demand for mental health services in higher education.

Annual Rapid-Access Hours per Client

Annual Routine Hours per Client

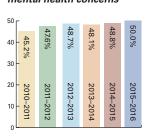

Mental Health Trends

As of this report, CCMH has generated six annual data sets (2010-2011, 2011-2012, 2012-2013, 2013-2014, 2014-2015, 2015-2016) making it possible to examine trends among college students seeking mental health services. To examine trends across key mental health indicators, the following items were simplified to "Yes" or "No," providing a proxy for the lifetime prevalence of each item. These items may have changed slightly over time; please refer to prior versions of the Standardized Data Set (SDS) for specifics.

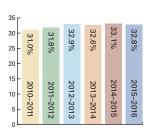

Data sets

Year	# of Institutions	# of Clients
2010-2011	97	82,611
2011-2012	120	97,012
2012-2013	132	95,109
2013-2014	140	101,027
2014-2015	139	100,736
2015-2016	139	150,483

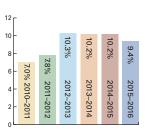

Attended counseling for mental health concerns

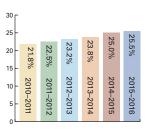

Taken a medication for mental health concerns

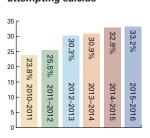

Been hospitalized for mental health concerns

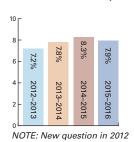

Purposely injured yourself without suicidal intent (e.g., cutting, hitting, burning, hair pulling, etc.)

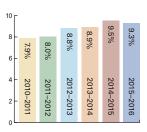

Seriously considered attempting suicide

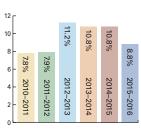

Seriously considered attempting suicide (Last time = within the last month or sooner)

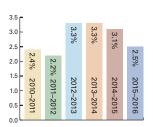

Made a suicide attempt

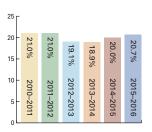

Considered seriously hurting another person

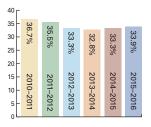

Intentionally caused serious injury to another person

Had unwanted sexual contact(s) or experience(s)

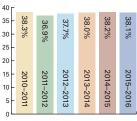

Experienced harassing, controlling, and/or abusive behavior from another person (e.g., friend, family member, partner, authority figure, etc.)

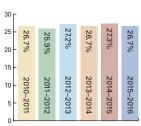

Experienced a traumatic event that caused you to feel intense fear,

helplessness, or horror

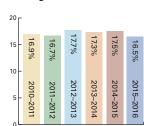

Felt the need to reduce your alcohol or drug use

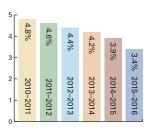

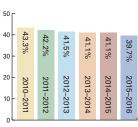

Others have expressed concern about your alcohol or drug use

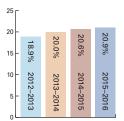

Received treatment for alcohol or drug use

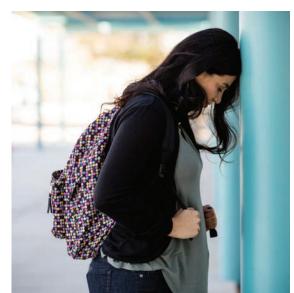

Engaged in binge drinking (within the last 2 weeks)

Used marijuana (within the last 2 weeks)

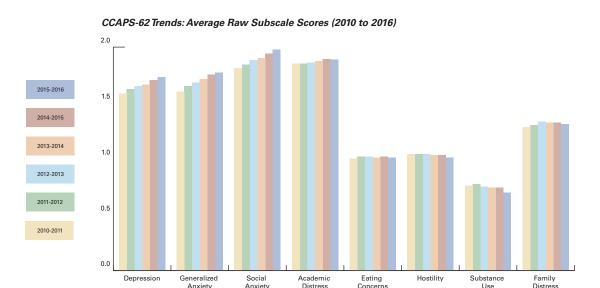

NOTE: New question in 2012

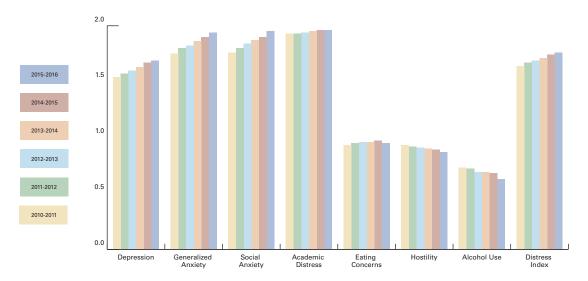

CCAPS Trends

The Counseling Center Assessment of Psychological Symptoms (CCAPS) is a multidimensional assessment and outcome-monitoring instrument used by CCMH counseling centers. Students respond to the items on a five-point Likert scale from 0 (not at all like me) to 4 (extremely like me). (There are two versions of CCAPS: the 62-item version [long-form] and the 34-item version [short-form] that is used for repeated measurement or brief assessment.) To explore whether student self-reported distress is changing over time, we examined the average raw CCAPS subscale scores over the last six years for both the CCAPS-62 and the CCAPS-34.

Counseling Center Resource Utilization by Students

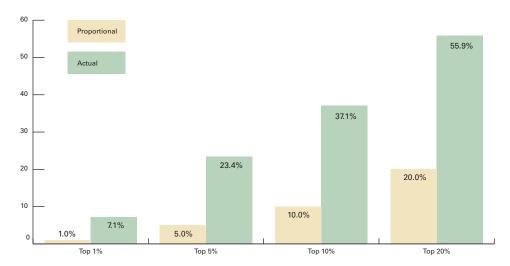

Data from 2015-2016 was analyzed to determine how counseling center resources were distributed among students seeking services. The following points describe how counseling center appointments were utilized by 132,597 students across participating CCMH centers in 2015-2016:

- The most common number of appointments per client/per year is one (1).
- Clients averaged 5.84 appointments with a range of 1-139 appointments.
- Twenty percent of clients accounted for 56% of all appointments.
- Ten percent of clients accounted for 37% of all appointments, averaging 22 appointments.
- Five percent of clients accounted for 23% of all appointments, averaging 27 appointments.
- One percent of clients accounted for 7.1% of all appointments, averaging 41 appointments.
- Ten clients utilized a total of 878 appointments.

These trends are consistent with reporting from prior years. To further illustrate the nature of service utilization by these percentile groups, the chart below contrasts each group's proportional utilization vs. their actual utilization.

As discussed in last year's 2015 Annual Report, students who report a lifetime history of threat-to-self characteristics (nonsuicidal self-injury, suicidal ideation, etc.) use 20-30% more services than those who do not. On the other hand, the most common number of appointments continues to be one (1). These data points highlight the immense diversity of needs (as defined by utilization level) managed by counseling centers.

Appointment Utilization by Percentage Group: Proportional vs. Actual

Average Number of Attended Individual Sessions

A common question among counseling centers is: What is the average number of counseling sessions attended by clients? To examine this question, we reviewed the 2015-2016 appointment data for initial clinical evaluations and any individual counseling session:

- A. Total number of attended appointments (initial and individual counseling): 527,778
- B. Total number of clients who attended appointments in A: 113,192
- C. Average number of attended counseling sessions per client (A divided by B): 4.66

This preliminary analysis of actual appointment attendance data across 139 institutions and approximately 528,000 appointments indicates that clients attend slightly less than five sessions of individual counseling on average.

Standardized Data Set (SDS)

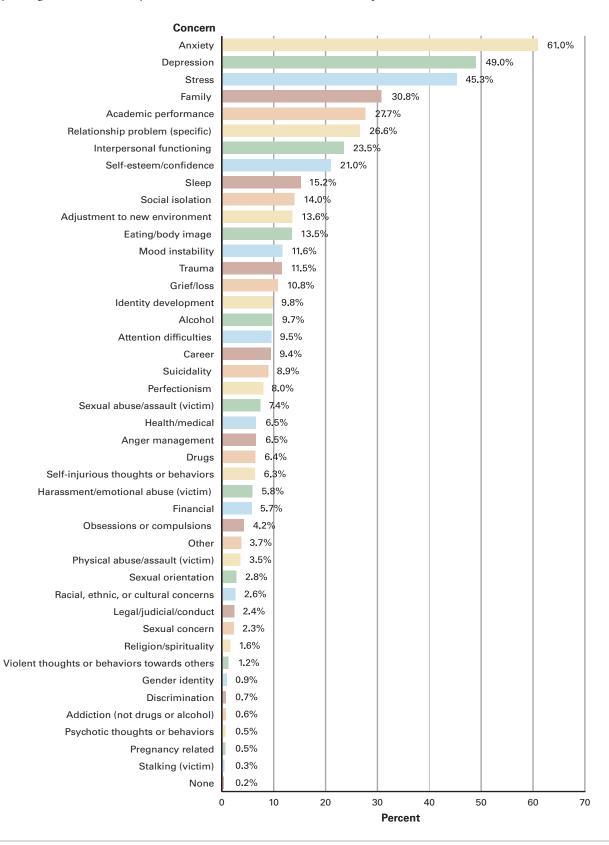

The Standardized Data Set (SDS) is a set of standardized data materials used by counseling centers during routine clinical practice. In this section we provide a closer analysis on the selected forms from the SDS: the Clinician Index of Client Concerns; the Termination Form; and client, provider, center, and institutional demographic information.

Clinician Index of Client Concerns (CLICC)

The CLICC was designed by CCMH to capture and facilitate reporting on the most common presenting concerns of counseling center clients, as assessed by the clinician, at the point of intake or equivalent appointment. The resulting data enables individual centers and CCMH to quickly and easily report on the most common client concerns in addition to supporting a wide variety of research. The CLICC includes 44 concerns and asks the clinician (a) to check all that apply and (b) to identify the "top concern" of those selected. This dual approach captures the complexity of each client while also highlighting the primary concern of each individual client.

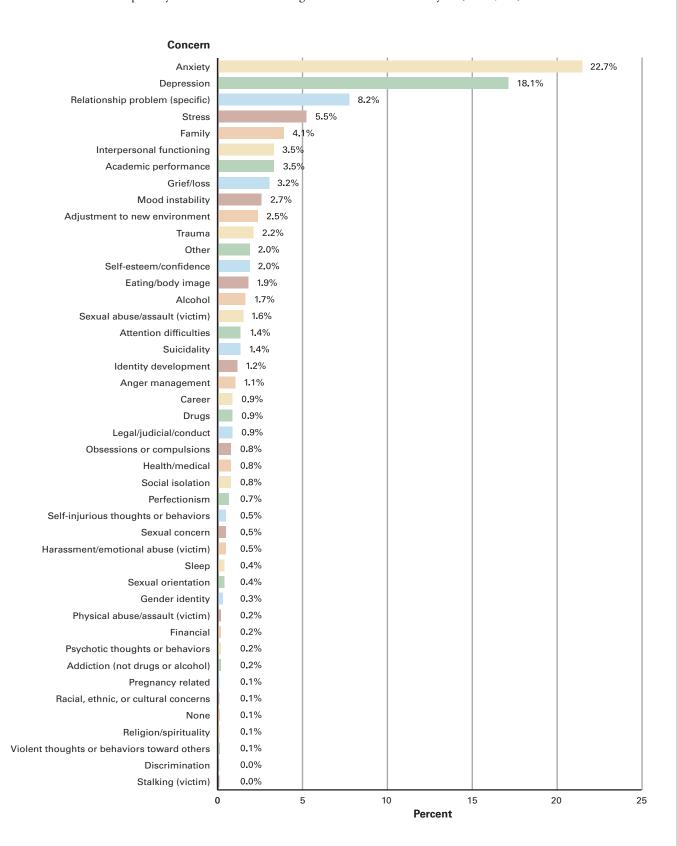

CLICC - "Check All That Apply"

For each client, clinicians are asked to "check all that apply" from a list of 44 concerns (as one client can have many concurrent concerns). This graph illustrates the frequency of each concern across all clients during the 2015-2016 academic year, regardless of how many concerns a student had or what his or her top concern was (N=51,567).

CLICC - "Top-Most Concern"

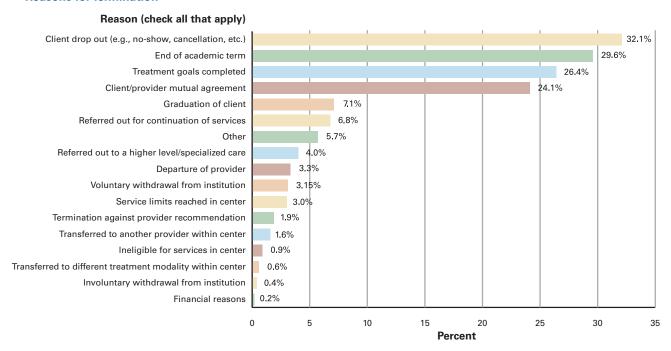

Clinicians are then asked to choose one primary concern (i.e., the top concern) per client. This graph illustrates the frequency of each concern as the primary concern for clients during the 2015-2016 academic year (N=51,567).

Termination Form

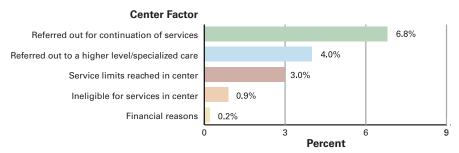

The Termination Form was introduced to CCMH counseling centers beginning July 2015 and is being gradually adopted. Clinicians are asked to complete the Termination Form at the end of individual treatment and instructed to "check all that apply" from a list of termination characteristics. In addition, clinicians are instructed to rate the amount of change that occurred for up to three presenting concerns (drawn from the CLICC categories) on a seven-point scale ranging from 1 (significant deterioration) to 7 (significant improvement). The graph below illustrates the frequency of available termination characteristics for students who received individual treatment during the 2015-2016 academic year (N=10,469).

Reasons for Termination

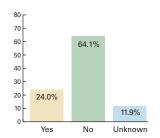

Role of Center Factors in Termination

The chart below focuses on a sub-set of termination characteristics that are determined by institution-specific variables such as treatment capacity, community referral policies, session limits, and operational definitions of eligibility for services. When considered together, these characteristics highlight the impact of institutional policies and procedures on the treatment provided to students.

Medications During Treatment

Clinicians are asked: "Did your client take a prescribed psychotropic medication during treatment?" The graph to the right describes whether clinicians indicated client medication use during individual treatment.

Change in Client Distress

Clinicians rate client change in client concerns on a seven-point scale ranging from 1 (significant deterioration) to 7 (significant improvement). The table below describes the average improvement for 10,469 clients receiving individual treatment. Areas of distress are ordered by the most frequently selected concern.

Rank	CLICC Item	Average Improvement	n	% of <i>n</i>
1	Anxiety	5.2	4,345	19.6
2	Depression	5.2	3,587	16.2
3	Relationship problem (specific)	5.3	1,598	7.2
4	Stress	5.2	1,515	6.8
5	Interpersonal functioning	5.2	1,394	6.3
6	Family	5.0	1,191	5.4
7	Academic performance	4.8	985	4.5
8	Self-esteem/confidence	5.4	730	3.3
9	Grief/loss	5.3	504	2.3
10	Alcohol	4.9	481	2.2
11	Mood instability	5.0	472	2.1
12	Eating/body image	4.9	454	2.1
13	Adjustment to new environment	5.5	412	1.9
14	Trauma	5.0	394	1.8
15	Suicidality	5.4	354	1.6
16	Career	5.4	300	1.4
17	Identity development	5.5	284	1.3
18	Perfectionism	5.3	273	1.2
19	Attention difficulties	5.0	266	1.2
20	Sexual abuse/assault (victim)	5.0	259	1.2
21	Anger management	5.1	257	1.2
22	Social isolation	5.2	250	1.1
23	Drugs	4.8	234	1.1
24	Other	4.4	201	0.9
25	Obsessions or compulsions	5.0	164	0.7
26	Health/medical	4.7	164	0.7
27	Sleep	5.0	152	0.7
28	Legal/judicial/conduct	5.3	141	0.6
30	Self-injurious thoughts or behavior	5.1	94	0.4
31	Racial, ethnic, or cultural concern	5.2	91	0.4
32	Sexual orientation	5.4	77	0.4
33	Harassment/emotional abuse (victim)	5.2	69	0.3
34	Sexual concern	5.3	61	0.3
35	Financial	4.5	50	0.2
36	Physical abuse/assault (victim)	4.6	49	0.2
37	Gender identity	5.3	47	0.2
38	Psychotic thoughts or behaviors	4.5	34	0.2
39	Addiction (not drugs or alcohol)	5.2	22	0.1
40	Religion/spirituality	5.3	20	0.1
41	Discrimination	5.5	13	0.1
42	Pregnancy related	4.7	12	0.1
43	Violent thoughts or behaviors toward others	5.3	10	0.1
44	Stalking (victim)	5.4	8	0.0

Client Demographic Information

The SDS contains a number of "core" or required items and a larger number of optional items that are typically asked of students seeking services. Because centers can ask different questions, the total number of responses varies by question.

What is your gender identity?

	n	Percentage
Woman	70,078	63.2
Man	39,183	35.3
Transgender	537	0.5
Self-Identify	1,166	1.1

This question is from the Standardized Data Set Question #88

What was your sex at birth?

	Overall (%) n=17,050	Male (%) n=6,105	Female (%) n=10,656	Transgender (%) n=75	Self-Identify (%) n=214
Female	63.6	0.3	99.7	66.7	70.1
Male	36.4	99.7	0.2	32.0	29.9
Intersex	0.0	0.0	0.0	1.3	0.0

This question is from the Standardized Data Set Question #90

Do you consider yourself to be:

	Overall (%) n=102,192	Male (%) n=35,923	Female (%) n=64,628	Transgender (%) n=511	Self-Identify (%) n=1,130
Heterosexual/ Straight	82.5	85.4	82.9	13.9	6.0
Lesbian	1.6	0.1	2.4	7.0	6.5
Gay	2.8	7.4	0.2	6.5	6.7
Bisexual	7.1	3.8	8.5	23.7	21.5
Questioning	2.5	1.8	2.8	8.6	7.3
Self-Identify	3.4	1.6	3.3	40.3	51.9

This question is from the Standardized Data Set Question #91

Since puberty, with whom have you had sexual experience(s)?

	Overall (%) n=13,669	Male (%) n=4,878	Female (%) n=8,600	Transgender (%) n=55	Self-Identify (%) n=136
Only with men	46.5	5.7	70.4	10.9	17.6
Mostly with men	9.0	3.1	12.3	9.1	12.5
About the same number of men and women	1.9	1.1	2.1	12.7	13.2
Mostly with women	2.2	3.8	1.0	20.0	9.6
Only with women	26.7	71.8	1.3	23.6	18.4
I have not had sexual experiences	13.7	14.5	13.0	23.6	28.7

People are different in their sexual attraction to other people. Which best describes your current feelings? Are you:

	Overall (%) n=15,350	Male (%) n=5,550	Female (%) n=9,602	Transgender (%) n=58	Self-Identify (%) n=140
Only attracted to women	30.3	80.2	1.7	20.7	17.1
Mostly attracted to women	4.7	8.1	2.4	25.9	19.3
Equally attracted to women and men	4.3	1.6	5.4	19.0	23.6
Mostly attracted to men	12.8	3.4	18.2	19.0	14.3
Only attracted to men	45.7	5.4	69.8	8.6	6.4
Not sure	1.6	1.0	1.8	5.2	10.0
I do not experience sexual attraction	0.6	0.3	0.7	1.7	9.3

This question is from the Standardized Data Set Question #94

What is your race/ethnicity?

	Overall (%) n=105,928	Male (%) n=37,409	Female (%) n=66,870	Transgender (%) n=520	Self-Identify (%) n=1,129
African-American/ Black	9.2	7.8	10.1	5.8	5.7
American Indian or Alaskan Native	0.5	0.4	0.5	1.0	0.4

This question is from the Standardized Data Set Question #33

Mental Health History Items

Attended counseling for mental health concerns

	Overall (%) n=101,875	Male (%) n=35,727	Female (%) n=64,543	Transgender (%) n=505	Self-Identify (%) n=1,100
Never	50.0	55.3	47.6	26.9	27.0
Prior to college	20.2	17.6	21.6	26.9	25.7
After starting college	16.7	16.1	16.9	19.0	21.9
Both	13.1	11.0	13.9	27.1	25.4

This question is from the Standardized Data Set Question #1

Taken a prescribed medication for mental health concerns

	Overall (%) n=100,305	Male (%) n=35,154	Female (%) n=63,581	Transgender (%) n=489	Self-Identify (%) n=1,081
Never	66.9	69.3	66.1	44.6	49.4
Prior to college	8.9	8.8	8.9	15.1	12.3
After starting college	12.9	12.3	13.0	18.4	18.0
Both	11.3	9.6	11.9	21.9	20.3

This question is from the Standardized Data Set Question #2

NOTE: The following paired questions ask the student to identify "How many times" and "the last time" for each experience/event. Frequencies for "the last time" questions are based on students who reported having the experience one time or more.

Been hospitalized for mental health concerns (how many times)

	Overall (%) n=104,761	Male (%) n=36,668	Female (%) n=66,435	Transgender (%) n=519	Self-Identify (%) n=1,139
Never	90.4	90.5	90.5	80.3	82.4
1 time	6.4	6.3	6.3	12.9	11.9
2-3 times	2.5	2.4	2.5	4.6	4.2
4-5 times	0.4	0.4	0.4	1.3	0.6
More than 5 times	0.3	0.3	0.3	0.8	0.9

Been hospitalized for mental health concerns (the last time)

	Overall (%) n=9,619	Male (%) n=3,314	Female (%) n=6,013	Transgender (%) n=96	Self-Identify (%) n=196
Never	0.6	0.7	0.5	0.0	1.0
Within the last 2 weeks	9.5	10.3	9.2	4.2	6.6
Within the last month	4.8	5.0	4.7	2.1	2.6
Within the last year	20.9	22.0	20.1	22.9	22.4
Within the last 1-5 years	42.3	38.6	44.0	54.2	46.9
More than 5 years ago	22.0	23.4	21.3	16.7	20.4

This question is from the Standardized Data Set Question #65

Purposely injured yourself without suicidal intent (e.g., cutting, hitting, burning, etc.) (how many times)

	Overall (%) n=104,494	Male (%) n=36,504	Female (%) n=66,347	Transgender (%) n=508	Self-Identify (%) n=1,135
Never	74.2	82.9	70.3	39.2	38.8
1 time	5.6	5.0	5.9	10.0	5.2
2-3 times	7.0	5.5	7.7	11.0	12.1
4-5 times	2.6	1.6	3.1	5.1	5.1
More than 5 times	10.7	5.1	13.1	34.6	38.9

This question is from the Standardized Data Set Question #72

Purposely injured yourself without suicidal intent (e.g., cutting, hitting, burning, etc.) (the last time)

	Overall (%) n=24,700	Male (%) n=5,649	Female (%) n=18,110	Transgender (%) n=291	Self-Identify (%) n=650
Never	0.5	0.7	0.5	0.0	0.3
Within the last 2 weeks	13.7	15.8	13.1	12.4	15.7
Within the last month	8.4	9.6	7.9	10.0	12.8
Within the last year	20.7	20.1	20.7	27.8	23.7
Within the last 1-5 years	34.4	32.4	35.1	32.0	34.0
More than 5 years ago	22.2	21.4	22.8	17.9	13.5

This question is from the Standardized Data Set Question #73

Seriously considered attempting suicide (how many times)

	Overall (%) n=105,301	Male (%) n=3,6815	Female (%) n=66,820	Transgender (%) n=523	Self-Identify (%) n=1,143
Never	66.5	68.7	66.2	30.4	31.1
1 time	12.0	11.4	12.3	14.3	15.2

Provider Data

The Standardized Data Set includes some basic demographic information about providers at participating counseling centers. The 2015-2016 data set represents over 3,419 unique providers. Answer totals vary by question since some counseling centers do not gather this data or a counselor chose not to answer one or more questions.

Gender

	n	Percentage (%)
