

“Editorial Essay: Information Technology Can Be Made To Matter: The Importance of E-Collaboration Research,”  
*International Journal of Electronic Collaboration*, Vol.1(3), i-v. (2005).

Understanding information technology's impact on firms is critical, particularly in light of the increasingly utilitarian nature of IT. This essay argues that the impact is positive, but in order to create research value, we need to spend more time understanding the processes that convert IT to positive outcomes. E-collaboration is discussed as an important concept in our understanding of these conversion processes.
