Postdoctoral Opportunity in IMMUNOLOGY

Department of Immunology
University of Washington - Seattle, WA, USA

Understanding How Tissue Microenvironments Influence the Immune Response

Use advanced imaging techniques to study the immune response

Postdoctoral positions are available in the laboratory of Dr. Michael Gerner to work on various projects. The lab investigates how tissue microenvironments and cellular positioning influence the generation of immune responses to vaccines, infections, as well as during cancer. Advanced analytical microscopy methods are used to study the immune system directly in vivo. Projects in further microscopy technology development are also available.

This position requires PhD level training in either immunology, microbiology, cancer biology, bioinformatics, or related disciplines. Previous experience with in vivo models of disease is desirable. The successful applicant will join a collaborative and dynamic research environment, and will be able to take advantage of the collegial surroundings provided by the UW’s Department of Immunology and the thriving research environment in Seattle.

Applications should be sent by email to Dr. Gerner at gernermy@uw.edu. Applicants are requested to send a CV, representative publications, and contact information for three references.
