No Intern Left Behind; Designing a boot camp around milestones

Robert Battisti, MD, MS
Briana Donaldson, DO
Financial Disclosures and/or Conflicts of Interest

• None for either party
Boot Camp?
Objectives

• Contemplate differences in readiness to begin internship
• Discuss difficulties in early identification of at risk residents
• Demonstrate curriculum design for early milestones assessment and identification of needs
• Consider the importance of the flipped classroom, and the value of using simulations and group activities to prove understanding
• Utilize techniques to provide early corrective action with at-risk learners to allow for correction of deficits
• Develop strategies to implement intensive intern school
On the variability of new interns
A tale of two Interns

• Intern 1
  • Out-of-state Medical School. Passed all Step exams first attempt. Step 2 score 31st percentile. Failed one medical school class (M1 year), Honored class on retake (over summer, graduated on time).

• Intern 2
  • In-state Medical School. Passed all Step exams first attempt. Step 2 score 11th percentile. No class/rotation failures.
Inconsistent Medical School Experiences

• Different Schools
• Different rotations, Different Goals
• Different Patient experiences (and even when done well, a general dearth.)
  • “To study medicine without books is to sail an uncharted sea, while to study medicine only from books is not to go to sea at all.”
    - Sir William Osler
A tale of two Interns

• Intern 1
  • ITE score as PGY-1: 7th percentile
  • 16 sub-competency deficiencies on initial milestones evaluation

• Intern 2
  • ITE score as PGY-1: 31st percentile
  • 0 sub-competency deficiencies on initial milestones evaluation
Identifying at risk Interns
Your Experiences

• Tell us about a time when you learned your intern wasn’t ready, or unexpectedly didn’t meet expectations
Milestones Data

• We first become aware of Milestones deficits with interns at initial CCC evaluation and with ITE results
• We have found that it can be difficult to correct a deficit if it is “entrenched”
# FACULTY EVALUATION OF RESIDENT COMPETENCIES

**Resident Name:** Dr. Madi Baker  
**Attending:** Dr. Sven Seldinger  
**Rotation:** 1/5/18 - 1/30/18  
**Rotation Date:** Critical Care

| 1. Needs Remediation, 2 = Doesn’t Meet All Expectations, 3 = Meets Expectations, 4 = Above Expectations, 5 = Exceptional, N/O = Not Observed |
|---|---|---|---|---|---|
| **PATIENT CARE** |  |  |  |  |  |
| 1. Conducts accurate and comprehensive history and physical examinations. | X |  |  |  |  |
| 2. Written and/or dictated documentation (H&P, progress notes, discharge summaries) is complete, thorough, clear and timely. |  |  |  |  |  |
| 3. Utilizes diagnostic resources and consultations in a timely, efficient and cost-conscious manner. |  |  |  |  |  |
| 4. Makes appropriate diagnostic and therapeutic decisions based on sound medical judgment and available evidence. |  |  |  |  |  |
| **MEDICAL KNOWLEDGE** |  |  |  |  |  |
| 1. General medical knowledge is appropriate. |  |  |  |  |  |
| 2. Able to answer questions concerning disease process, diagnostic tests, and treatment plan. |  |  |  |  |  |
| 3. Understands complex relationships, interactions, and mechanism of disease. |  |  |  |  |  |
| 4. Independently active and resourceful in the learning process by reading and being well prepared for rounds. |  |  |  |  |  |
| **PRACTICE-BASED IMPROVEMENT** |  |  |  |  |  |
| 1. Aware of limitations, evaluates own performance. |  |  |  |  |  |
| 2. Responds well to feedback on patient care. |  |  |  |  |  |
| 3. Performs literature searches and attempts to review current evidence for patient management. |  |  |  |  |  |
| **COMMUNICATION** |  |  |  |  |  |
| 1. Communicates effectively with patients and family by using understandable language, open-ended questions and actively listening. |  |  |  |  |  |
| 2. Reviews diagnosis, treatment plans, and follow-ups with team and patient. |  |  |  |  |  |
| 3. Patient presentations during rounds are appropriate, well organized, and precise. |  |  |  |  |  |
| 4. Communicates effectively with nursing and ancillary staff. |  |  |  |  |  |
| **PROFESSIONALISM** |  |  |  |  |  |
| 1. Is responsive to differences in patients’ lifestyles and values. |  |  |  |  |  |
| 2. Presents self in a professional manner during rounds including: demeanor, dress, and behavior. |  |  |  |  |  |
| 3. Is a respectful, reliable, punctual, and hard working team player. |  |  |  |  |  |
| **SYSTEM-BASED IMPROVEMENT** |  |  |  |  |  |
| 1. Effectively accesses and utilizes available resources within the healthcare system for coordination and management of patient care. |  |  |  |  |  |
| 2. Considers approaches to reduce errors and improve patient care. |  |  |  |  |  |

**Comments:** Great Resident! I would let them take care of my mom! Also great technique.

**FACULTY SIGNATURE:** Seldinger MD  
**RESIDENT SIGNATURE:** Madi Baker MD
Milestones and ABIM Scores
Professionalism evaluations and future actions against license²

Figure 1. Incidence of disciplinary actions, by program director rating.

Incidence of disciplinary actions per 10,000 person-years over 16 years for 66,171 internal medicine diplomates, based on professionalism rating by the program director after the first year of residency. Ratings range from 1 (lowest) to 9 (highest). Error bars indicate 95% CIs.
ITE Data

• We have seen a wide array of intern ITE scores, ITE as an intern predictive of future ITE scores
• ITE scores predict board pass rate$^3$
Remediation efforts and their failures

• Previous board prep remediation plan:
  • Those who scored under the 25th percentile on the ITE had mandatory board review sessions.
  • This showed a 12% year-over-year overall increase for those enrolled, but...
  • Excessive burden on faculty
  • A burnout accelerant for those enrolled,
Intern School
Prior Bootcamp data

• Previous work\textsuperscript{4} has shown earlier achievement of independence in patient management and procedural ACGME competencies in surgical residency with a senior medical student preparatory course.
A 5 week dedicated introductory block

- Provide a standardized baseline
- Provide a starting point for wellness/resiliency
- Recognize (and start correcting) deficits early
- Provide hands on experience
  - Not usual rotations
An attempt to standardize baselines

• Making sure the “must-know” topics
  • ACS, Stroke, CHF, Arrhythmia, etc.

• Introduce expectations
  • Functionality from day one of first clinical rotation
A starting point for wellness

• Class bonding
• Team-building activities
• Meet and Greet Party
• Wellness half days (with suggestions)
• Gatekeeper training for suicide prevention
• Initiation of Group Counseling
An attempt to recognize deficits early

• Much of the week was education leading toward a simulated experience.

• Both the simulations as well as case-based discussions were evaluated using the ACGME milestones.
An attempt to provide hands on experience – The functionality of internship

• Just over 1/3 of the block was clinical time
• Spent on various core rotations
  • Learning roles, experiencing service lines
    • How to admit, how to consult, order sets, notes, etc.
• Change in team structure to allow for this
Schedule

- Monday-Friday for 5 weeks
- Typically 1-2 simulation half-days per week in groups of 4
- Reading assignments associated with topics covered in discussion/case-based lectures to be covered before meeting (flipped classroom)
Topics Covered

• Case-base discussions
  • Reading EKG, Reading CXR
  • How to approach common chief complaints
  • De-escalation training, personal safety, safety policies and procedures
  • Creating a culture of safety, Sick vs. Not Sick
  • Expectations, How to respond to common issues/pages
Benefits of Simulation
Topics Assessed in Simulation

• Codes/Arrhythmias
• Acute Abdomen, DKA, Acute Aortic Syndromes, GI bleed
• PE, Septic Shock, Hypercapnia, Status Epilepticus
• Procedural Simulation, Ultrasound Simulation
• Stroke

Small Groups: Design your own intern school
Using engaging and interactive teaching techniques
The Millennial Learner
The Millennial Learner

- More interaction, less PowerPoint
- Discussions are primarily case-based and small group-oriented
Educational Methods of Intern School

• Flipped classroom
  • Content assimilation is done outside of classroom (in desired method of learner)
  • Homework (problem solving) done in the classroom

• This allows you to assess their understanding in the classroom and correct their deficits in real time
Educational Methods of Intern School

• Play to competitive nature
  • Simulation time (17% of the block)
  • Games (especially for more tedious but necessary items)

• Reinforcing of topics through multiple modalities
Assessing milestones in Intern School
Applying ACGME Milestones

• Faculty assigned milestone sub-competencies (6-10) to each activity they led

• Following the session this faculty member completed evaluation

• Evaluation form was as painless as possible

**Comments:** seriously struggled with DKGs and will need close coaching and serial check-ins to ensure she can read DKGs at the appropriate level. 

**Excellence:** Noted.
Communicating Progress/Deficits

• Formative real time feedback
  • Sim debriefing, case-based interactions (more towards simulated bedside teaching)
    • Reinforcing and corrective

• Feedback from the learners

• Summative end of block milestones evaluation
  • 477 data yes/no points on each intern as related to sub-competencies
Developing Individualized Learning Plan

• Case example 1: Intern E struggled with EKG interpretation. This intern was asked how they would like to improve. They wished to read every EKG of every patient on service to their attending. The CCC communicated this to the attending. The intern was held to this and improved dramatically.
Developing Individualized Learning Plan

• Case example 2: Intern I had issues with respecting patient privacy. Once intern was informed of behavior and its consequences, this intern changed behavior.

Changes are coming

The CBD\textsuperscript{1,2} Competence Continuum

By introducing a competency-based medical education model to resident training and specialty practices, the CBD Initiative will break down specialist education into a series of integrated stages—starting at transition to discipline and moving through practice. The CBD Competence Continuum provides a quick look at the new stages which begin upon entry into a discipline-specific residency following the attainment of the MD designation.

Transition out of professional practice

Continuing professional development (maintenance of competence and advanced expertise)

Certification

Transition to practice

Royal College Examination

Core of discipline

Foundations of discipline

Transition to discipline (orientation and assessment)

As part of maintenance of competence, a physician progresses in competence to attain expertise through CPD within their scope of practice. Throughout this stage, the physician is focused on learning in practice.

In this stage, the senior trainee should demonstrate readiness to make the transition to autonomous practice. Within CBD, examination would take place at the end of the “core of discipline” stage, allowing residents to hone their competencies in their last months of training. Royal College certification will be granted upon the successful completion of the Transition to practice stage. This last stage of residency continues to correspond with the Senior Resident role in the existing model.

This stage covers broad-based competencies that every trainee must acquire before moving on to more advanced, discipline-specific competencies. This stage continues to correspond with Junior Resident status.

In this last stage, physicians adapt to the final practice period and their changing healthcare role.

As part of enhanced expertise, the physician’s scope of practice evolves over time to respond to practice needs. Interests and acquisition of skills and abilities.

This stage covers the core competencies that make up the majority of a discipline. This stage corresponds to the Senior Resident status currently used within the existing education model.

This “new” stage emphasizes the orientation and assessment of new trainees arriving from different medical schools and programs (including outside Canada). This stage may be one hour, one day, one month or two months, depending on program needs. This stage corresponds to the Junior Resident status currently used within the existing education model.
Developing a Curriculum

• You’re already a content expert
• Bring together other interested faculty
  • Brainstorm and work to tailor activities to milestones
  • Use your resources
FAQs

• How are interns not on service?
  • Unique PGY-2 scheduling
    • Challenge for larger institutions

• How did you get so many data points?
  • Emphasis on PAINLESS evaluations

• How did you have enough faculty to lead these sessions?
  • We all pitched in, covered two teams, etc.
    • It is worth it for the months that follow!
