Motor Speech Disorders and Dysphagia in Progressive Supranuclear Palsy

Heather M. Clark, PhD
Consultant and Chair
Division of Speech Pathology, Department of Neurology
Mayo Clinic Rochester

Friday 18 October 2019 @ 3:30 PM
Eagleson Hall, Room 001

Progressive Supranuclear Palsy (PSP) is the most common of the Parkinson Plus syndromes. Bulbar dysfunction occurs early in the disease and may even be the presenting symptom of the neurodegenerative process. This talk will review motor speech and swallowing findings from a large cohort of participants with common and uncommon variants of PSP, exploring pathophysiologic mechanisms contributing to patterns of deficits across variants.
