ENGAGEMENT ACTIVITIES FOR THE ONLINE CLASSROOM

**Web-Based Scavenger Hunt/Site Visit**
Students will explore a website, a virtual location, or an online simulation. During this process, ask students to identify, describe, and evaluate course concepts relevant to the class.

**Jigsaw Activity**
Students are broken up into small groups and either become “experts” on a part of the text or answer a specific question assigned to them. Then students will share this information with the rest of the group.

**Peer Review**
Students can review a peer’s assignment to practice both giving and receiving feedback. Students can see their coursework from different perspectives before turning in the final assignment.

**Virtual Exercises**
Students watch short lectures, then answer a set of questions. Based on how they perform, they are provided feedback with additional information that targets areas for improvement.

**Portfolios/Showcase Sample Work**
Students assemble artifacts of their work that meet specific criteria. In addition, students will reflect on their sample work and why it is included.
