

## Vladimir Sabado – Career Plan

I'm a little bit unique compared to some of the other students because my Bachelor's degree in Computer Science is my second Bachelor's degree, with Biology being my first. Currently I am a Software Engineer Intern for Affirma Consulting and plan to remain so until the day of my graduation. My ongoing projects for Affirma are client-owned and will be used commercially by the client when completed. While my prospect of working full-time for Affirma after graduation is rather bright, I currently do not have any full-time offers. I intend to begin looking after the end of the semester.

### 3 – 6 Months

- Finish Ruby on Rails Udemy course.
- Graduate from UARK.
- Complete the next phases of my projects at Affirma.
- Obtain a full-time position after graduation.

### 6 – 12 Months

- Decide whether to remain in the state for work or move elsewhere.
- Better understand my strengths, weaknesses, and interests and cater my job searches based on those.
- Obtain a full-time position if not offered already.

### 12+ Months

- Evaluate my current position at my work.
- Evaluate my quality of life, satisfaction, and interests.
- Work on side projects to gain passive income.
- Revisit investments, particularly Bitcoin.
- Understand blockchain technology and possibly pursue a career in blockchain development.

### Long Term Goals

- Maintain a respectable position in a reputable company.
- Financially stable and thriving.
- Retire in my 40s and just enjoy life.

### Personal Goals

- Get married to my girlfriend and start a life together wherever we like in the world.

- Be so indispensable that I can work anywhere in the world as a Software Engineer or even at a higher status.
