## The Problem

- Students have valuable skills and need experience.
- Businesses have small budgets and big needs.
- There is no efficient way for them to find each other.

## Why We Chose This

We wanted to work on a project that would have real impact and a real user base and we found that with Sider.

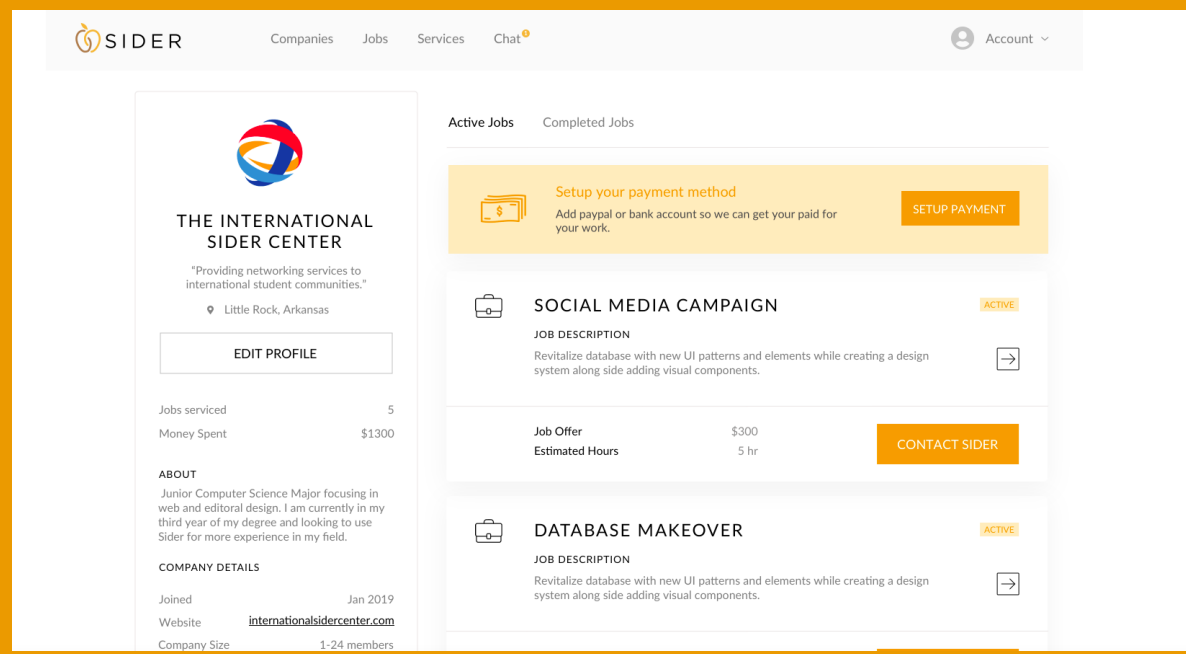

Since the project was already in development by our fellow developer, Tyler Tracy, we could avoid having to start a new project with the typical boilerplate code and focus on designing a full-fledged app.

## The Solution

A local freelancing platform for students that allows students to get real, valuable experience while attending University.

Currently 100+ active users & 40+ Companies.

## Future Plans

**Mobile Applications**  
Use Flutter to make an Android and IOS app

**Job Recommendations**  
Recommendation engine that provides jobs based on user data

**Price Negotiation**  
Users can either opt out of payment for gift cards or ask for different amounts of money.
