Career Plan

6 Month Goals

- I Just accepted an internship at Cerner, a medical technologies company. I'm planning on learning as much as I can out of this new experience and applying that to future endeavors.
 - Graduate in December of 2019
-

6-12 Month Goals

- Getting a full-time job as software developer.
 - Get invested in a good company that can provide the resources and time to develop my skills as a developer.
 - I plan on moving to a new city/place that I would find enticing to live in to explore new experiences in life.
-

Long Term Goals

- Be financially independent and have a stable/successful life.
- Establish great connection with people to expand my network to maximize benefits.
- Taking what I have learned throughout my life and applying that to my own future business/cause. I don't plan on working for a company forever, but I need to get my foot in the door in order to learn the skillset in order to be successful.
- Be able to support my family and maybe sit down and start my own once I'm stable enough to support one.
- Be able to travel the world and do what I want in life without any limitations (I.e, not working for a company that will prevent my lifestyle of adventures)
