

### **Career Plan**

I don't currently have any target companies or graduate schools, and my expected graduation date is December of 2019. In the past, I've been a part of a Research Experience for Undergraduates, where we focused on machine learning and Android to create an AI that could recognize objects in a picture and make a judgment based on the position. I've also recently been in contact with someone specializing in Cryptography, Daniel Apon from NIST, who will be helping with how I should move forward if I want to specialize in that field. My next step will be to follow up on some opportunities such as SURF or Pathways internships and get more experience that way.
