

## **Career Plan**

### **Goal:**

My goal is to have a job lined up after I graduate at the end of the spring semester. I plan to attend the career fair on the 11<sup>th</sup> with a focus on smaller companies with available IT positions or frontend software development. Some other ways I have been looking for opportunities are on Indeed and Handshake

### **Preparation:**

To prepare for interviews, I am using LeetCode.com which is a site for practicing common technical interview questions at varying difficulties. I also plan to use the university's mock interviews at the career center. So far, I have had one interview with J. B. Hunt for an internship position. I also intend to revise and develop my LinkedIn profile.

### **Target Companies:**

Besides the companies that will be attending the career fair, I am also researching and applying to Fidelity, BNSF, USM Business Systems, Lockheed Martin, and Intel for possible opportunities.
